WEATHERHUB SmartHome temperature monitor

Make your Smartphone into a **mobile climate meter**. With **WEATHERHUB** you can easily view and monitor **at any time and anywhere** the in- and outdoor temperature values at home.

Installation in only 3 easy steps

Download the **free WEATHERHUB app** on your smartphone and connect the network port on the gateway to your router. Finally, place the batteries into the wireless transmitter and a scan with the prompted QR code with the app - done.

Free app with many useful features

It has never been so **easy to monitor your room climate at home** with your smartphone. With **WEATHERHUB from TFA** you can at any time and anywhere view temperature values e.g. in your bedroom, loft, kitchen, storage room, greenhouse or living room. You can **set alarm limits** and be notified when the limits are exceeded. The data of **up to 50 wireless sensors** can received also on different smartphones.

- **Readings are stored for the last 90 days**

- **Additional wireless sensors for temperature and humidity, plus also water alarm sensors available as accessories**

- **Free app available for iPhone 4 (or newer), iPad 2 (or newer) and Android**

Smartphone not included

NEW
